

SELF-DESIGNED PROGRAMS:

Rural Regional PGY3 Enhanced Skills Programs

Description:

The Rural Enhanced Skills program is an opportunity for Family Medicine Residents to extend their training in order to acquire the skills to meet the health care needs of smaller rural and remote communities.

With the support of McMaster University in collaboration with the Rural Ontario Medical Program and funded by the Ministry of Health and Long Term Care; Residents will “self-design” their additional months of training. Additional education areas include:

- Acute Care/Critical Care
- Maternal/Child Health
- Palliative care
- Mental Health
- or a combination of these

Examples of Resident Community Based Training Schedules:

The following is a set of template examples of our Self-Designed rural enhanced skills program which family medicine residents may consider. Other opportunities or variations will be considered based on demonstrated community and learner need. The balance of enhanced skills in specific areas with the maintenance of generalist family practice will ensure confidence and competence for the resident as they transition to rural practice.

Please note: these are sample schedules. Communities and Academic centres as well as rotation type can be modified.

Stream/ Pillar	Months	BLOCK 1	BLOCK 2	BLOCK 3	BLOCK 4	BLOCK 5	BLOCK 6
Acute Care Critical Care	3-6	PEDS ER Academic Centre	ER Owen Sound	ER Barrie	ER Collingwood	ANES Collingwood	HOSP Owen Sound
Palliative	3-6	Med Onc Barrie	PALL Grand River KW	PALL Collingwood	PALL Collingwood	PALL St. Peter's Hamilton	Bruyere continuing care OTT
Acute Care ER /OB	6	ANES Barrie	OB Barrie	ER Barrie	ICU Southlake	PEDS & ER Toronto	OB Fergus/ Hanover
Addictions Medicine	3	Addictions Medicine Port Elgin	Pain Medicine Fort Erie	Family Medicine / Addictions Barrie R/H			
Maternal Child Health	3	OB Brampton	NICU /Fertility Clinic Academic Centre	Maternity Centre Peterborough			
Mental Health	3	FHT Collingwood	Psych Way Point	FAM			

Please note: Family Medicine Week Backs integrated. Rural Remote opportunities with NOSM.

Application process:

In the required Letter of Intent, applicants must outline their proposed curriculum and be able to describe how the Enhanced Skills training they are seeking will meet specific community need.

Applicants will apply using the prescribed Application Form for a Self-Directed program. References for those interested in an Enhanced Skill PGY3 Rural Program should come from current program directors, rural community or rural faculty.

[Please find Application Form and application guidelines on our Enhanced Skills home page.](#)

Time available: 3-12 months, number of positions not defined

Program Director: Dr. Peter Wells

For further program details please contact: fmpgy3@mcmaster.ca

Further background:

Enhanced skill programs are valuable for family physicians in whatever communities they eventually practice. Notably, certain of these programs are essential for 'rural' communities that lack sufficient populations to support specialist (RCPSC) medical services. This is especially true for the Emergency Medicine, Anesthesia, Obstetrics, Palliative and In Patient care services that often necessarily have to be provided by family physicians in order to meet the health care needs of smaller 'rural' and remote communities.

In order to practice as a physician in rural and regional settings with comprehensive knowledge skills and professional behaviours, some residents may require additional learning opportunities beyond those provided in the family medicine residency. The learning opportunities are to enhance their scope of practice and further develop competencies and skills sets responsive to community need. This self-designed PGY3 program is directed towards rural population need and not for extending the resident's training for their own professional interests.

These positions are a collaboration with the Rural Ontario Medical Program and have supportive funding from Ontario Ministry of Health and Long Term Care for residents applying for a Self-Directed Enhanced Skills Program. In keeping with the Enhanced Skills Program goals and objectives, a Self-Directed Program must be focused on the development of skills and experiences that will enable the learner to meet the needs of populations in rural areas where gaps in medical care exist.

The communities within the ROMP program will serve as the learning centres to achieve the goals and objectives for the PGY3 enhanced rural skills program. Clinical rotations in the community will assist in the further development of the knowledge, skills and professional attitudes to support practice in rural communities and sites with less resources. Regional and academic centres will also provide learning environments to achieve referral, volume and other skill, knowledge and professional goals.

It is evolved programs that balance the necessity of acquiring certain skills through experience in more densely populated urban settings with the importance of understanding and developing the confidence to apply these skills in more difficult to service 'rural' settings. With a continued commitment to ensuring the rurality of the

Rural PGY3 positions, these positions will make a positive contribution to the health of rural communities and will continue to provide outstanding learning opportunities.

The individual learning objectives of each resident are critical to the organization of the PGY3 Enhanced Skills program. Important to the design is the maintenance of time back in the family practice to offer the continuity of care making the learning practical and grounded in family practice. The balance of enhanced skills in specific areas with the maintenance generalist family practice will ensure confidence and competence for the resident as they transition to rural practice.
